

# Belvidere Residents

Are you interested in an alternative to your current internet provider? Planet Networks has approached our town about installing high speed fiber cable. The first step in this process is to complete a survey below. Please take the time to complete this survey.

## **What is the objective of this survey?**

Fiber cable can cost over \$30,000 per mile. Planet Networks is confident Belvidere is a cost-effective and high-demand market for us. However, this survey will give us insight in terms of what parts of the town to serve first, how to map out our network, and provide the most accurate timelines possible to get your residents connected on our network.

*The survey can be accessed via the link or QR code below:*
